Imran Shah

Software Engineer | C++ Developer | QA & Test Automation | Python
| Bash | DSP & Modem Analysis | SRS Compliance | Automated Test
Frameworks | System Verification & Validation | US Citizen | Secret
Clearance

Washington DC-Baltimore Area

Summary

I am a results-driven Software Engineer & Test Automation Engineer with hands-on experience in C++ development, automated testing, cursor AI, SRS validation, and system-level verification. I design, implement, and test mission-critical software systems with a strong focus on quality, reliability, and performance.

My work includes building automated Python/Bash test suites that significantly reduce manual testing time, implementing software features in C++, analyzing modem frequencies and system logs, and conducting thorough CSCI-level testing for high-assurance systems. I enjoy solving complex technical problems, optimizing processes, and improving system efficiency.

I am committed to writing clean, maintainable code and producing reliable test frameworks that help teams ship high-quality software faster. I'm actively expanding my expertise in Digital Signal Processing (DSP) and AI/ML, with the goal of contributing to innovative, high-impact engineering solutions.

Experience

TECH(x)

Software Engineer II
May 2024 - Present (2 years)
Maryland, United States

Conduct comprehensive verification and validation of new software procedures to ensure full compliance with Software Requirements Specifications (SRS).

Verify correct C++ design implementation, identifying mismatches early and coordinating with developers to resolve issues.

Develop and maintain automated test suites in Python and Bash, improving test coverage and consistency across releases.

Achieved a 65% reduction in testing time by designing and deploying scalable automated testing frameworks.

Designed and executed detailed test plans and test procedures, including complete CSCI-level testing for mission-critical software.

Developed a software downgrade automation tool, reducing downgrade time to one-fourth of the original process.

Implement production-level software features in C++, following clean coding practices and design principles.

Analyze modem frequencies, signal logs, and system outputs to diagnose performance issues and verify correct system behavior.

Perform root-cause analysis on software anomalies and contribute to continuous improvements in reliability.

Collaborate with cross-functional engineering teams to support efficient, high-quality software releases.

MAG Aerospace

Software Developer II

August 2022 - May 2024 (1 year 10 months)

Maryland, United States

US Army

Corporal

February 2017 - May 2023 (6 years 4 months)

Glen Burnie, Maryland

- Rank E-4 (Specialist)
- Team Leader of one of the Squad of our platoon
- Providing all kind of support and guidance to E1, E2 and E3 ranked soldiers
- Maintaining high morale among all the squad members

Amazon

2 years 4 months

IT Support Technician II

March 2022 - August 2022 (6 months)

Baltimore, Maryland, United States

- Diagnose and troubleshoot network issues in view of OSI model
- Dealing with TCP/UDP, DHCP, Routers and Switches on everyday basis
- Using PowerShell/bash to monitor network devices remotely by running python-based scripts
- Analyzing network devices logs to mitigate early warning signals
- Pushing updates to client devices using amazon tools
- Running scripts in Linux environment to provision client devices
- Monitoring network devices using RDP (Remote Desk Protocols)
- Utilizing DHCP and Static IP pool efficiently to avoid additional costs
- Setting up permissions in active directory for various groups and departments
- Setting up VLAN for departments and groups

IT Equipment Coordinator

May 2020 - March 2022 (1 year 11 months)

Baltimore, Maryland, United States

- Procured IT equipment by doing cost benefit analysis
- Coordinated with project managers to ensure functionality and availability of required equipment
- Solved network issues by analyzing log reports

Askari Bank

8 years 10 months

Relationship Manager

November 2014 - December 2015 (1 year 2 months)

Islamabad

- Product Design – Building Taylor made products for the customers
- Team Management – Managing a team of relationship associates to meet business goals
- Business expansion – Laying out strategies to enhance business and beating competition

Commercial Credit Analyst

March 2007 - October 2014 (7 years 8 months)

Islamabad, Pakistan

- Financial Modeling – Financial modeling of businesses & business proposal writings
- Financial analysis – Financial analysis of client's business figures to hedge banks' risk

Standard Chartered Bank
Customer Services Officer
March 2006 - December 2006 (10 months)
Islamabad, Pakistan

- Account Opening
- Know your Customers (KYC) adherence
- Anti Money Laundry
- Selling Bank's Liability Products
- Inward & Outward Clearing
- Customers' Complaints handling
- Quality Service Management
- Cheque Book issuance.
- Issuance of Bank Statements & Balance Certificates.
- Drop Box Operations.
- Deliver Customer Oriented Services
- Cash Management

Education

UMBC Department of Computer Science and Electrical Engineering
Bachelor of Science - BS CS, Computer Software Engineering · (May 2024 - May 2026)

Anne Arundel Community College
Associate's degree, Computer Science · (October 2019 - October 2022)

Allama Iqbal Open University
Master of Business Administration - MBA, Accounting and Finance · (March 2009 - March 2011)

University of the Punjab
Bachelor of Applied Science - BASc, Mathematics and Statistics · (March 2004 - March 2006)
